MOVIE BOOKING PROJECT

INTRODUCTION

Web-based Movie Booking Management System is a management system website that enables individuals who want to book ticket for watching their favorite actor movie. It also enables cinema hall and store the data of movies for those who want to see the details. Here you see many types of cinema hall of fully air conditional and normal. As per your requirements and as your budget you book your ticket. Watching movie gives you relax mind and full body relax. Over one lakh or more tickets of movie sold every year. This is a web portal for buying cinema tickets online. Customers visiting this portal can get to know about latest released movies their schedule and also by ticket on any particular date. It helps building better Customer Relationship.

OBJECTIVES

The main purpose of Online Movie Ticket Booking System project is to provide an automated system of buying movie ticket. Now customer can get to know movie show timing and buy tickets online via internet 24x7. Admin has full control over all modules of this application. Admin can add new movie details and poster. After that he enters movie schedule and booking opening date. Customer can view this schedule and book ticket in his desired show time. Customer should register themselves on the web portal for buying ticket. This system is developed keeping in view of the current multiplex working pattern. Schedule for many screens can be programmed in this application. Customer can choose city and name of multiplex where they want to see movie and get their movie timings. Customers can

see a graphical view of seat availability and choose their desired seat. They can pay ticket amount online via credit card or debit card.

TECHNOLOGY USED

We have developed this project using the below technology.

- HTML - Page layout has been designed in HTML.

- CSS - CSS has been used for all the designing part.

FUTURE OF PROJECT

- In future our booking management system will have extra facilities and more cinema hall for more employees.
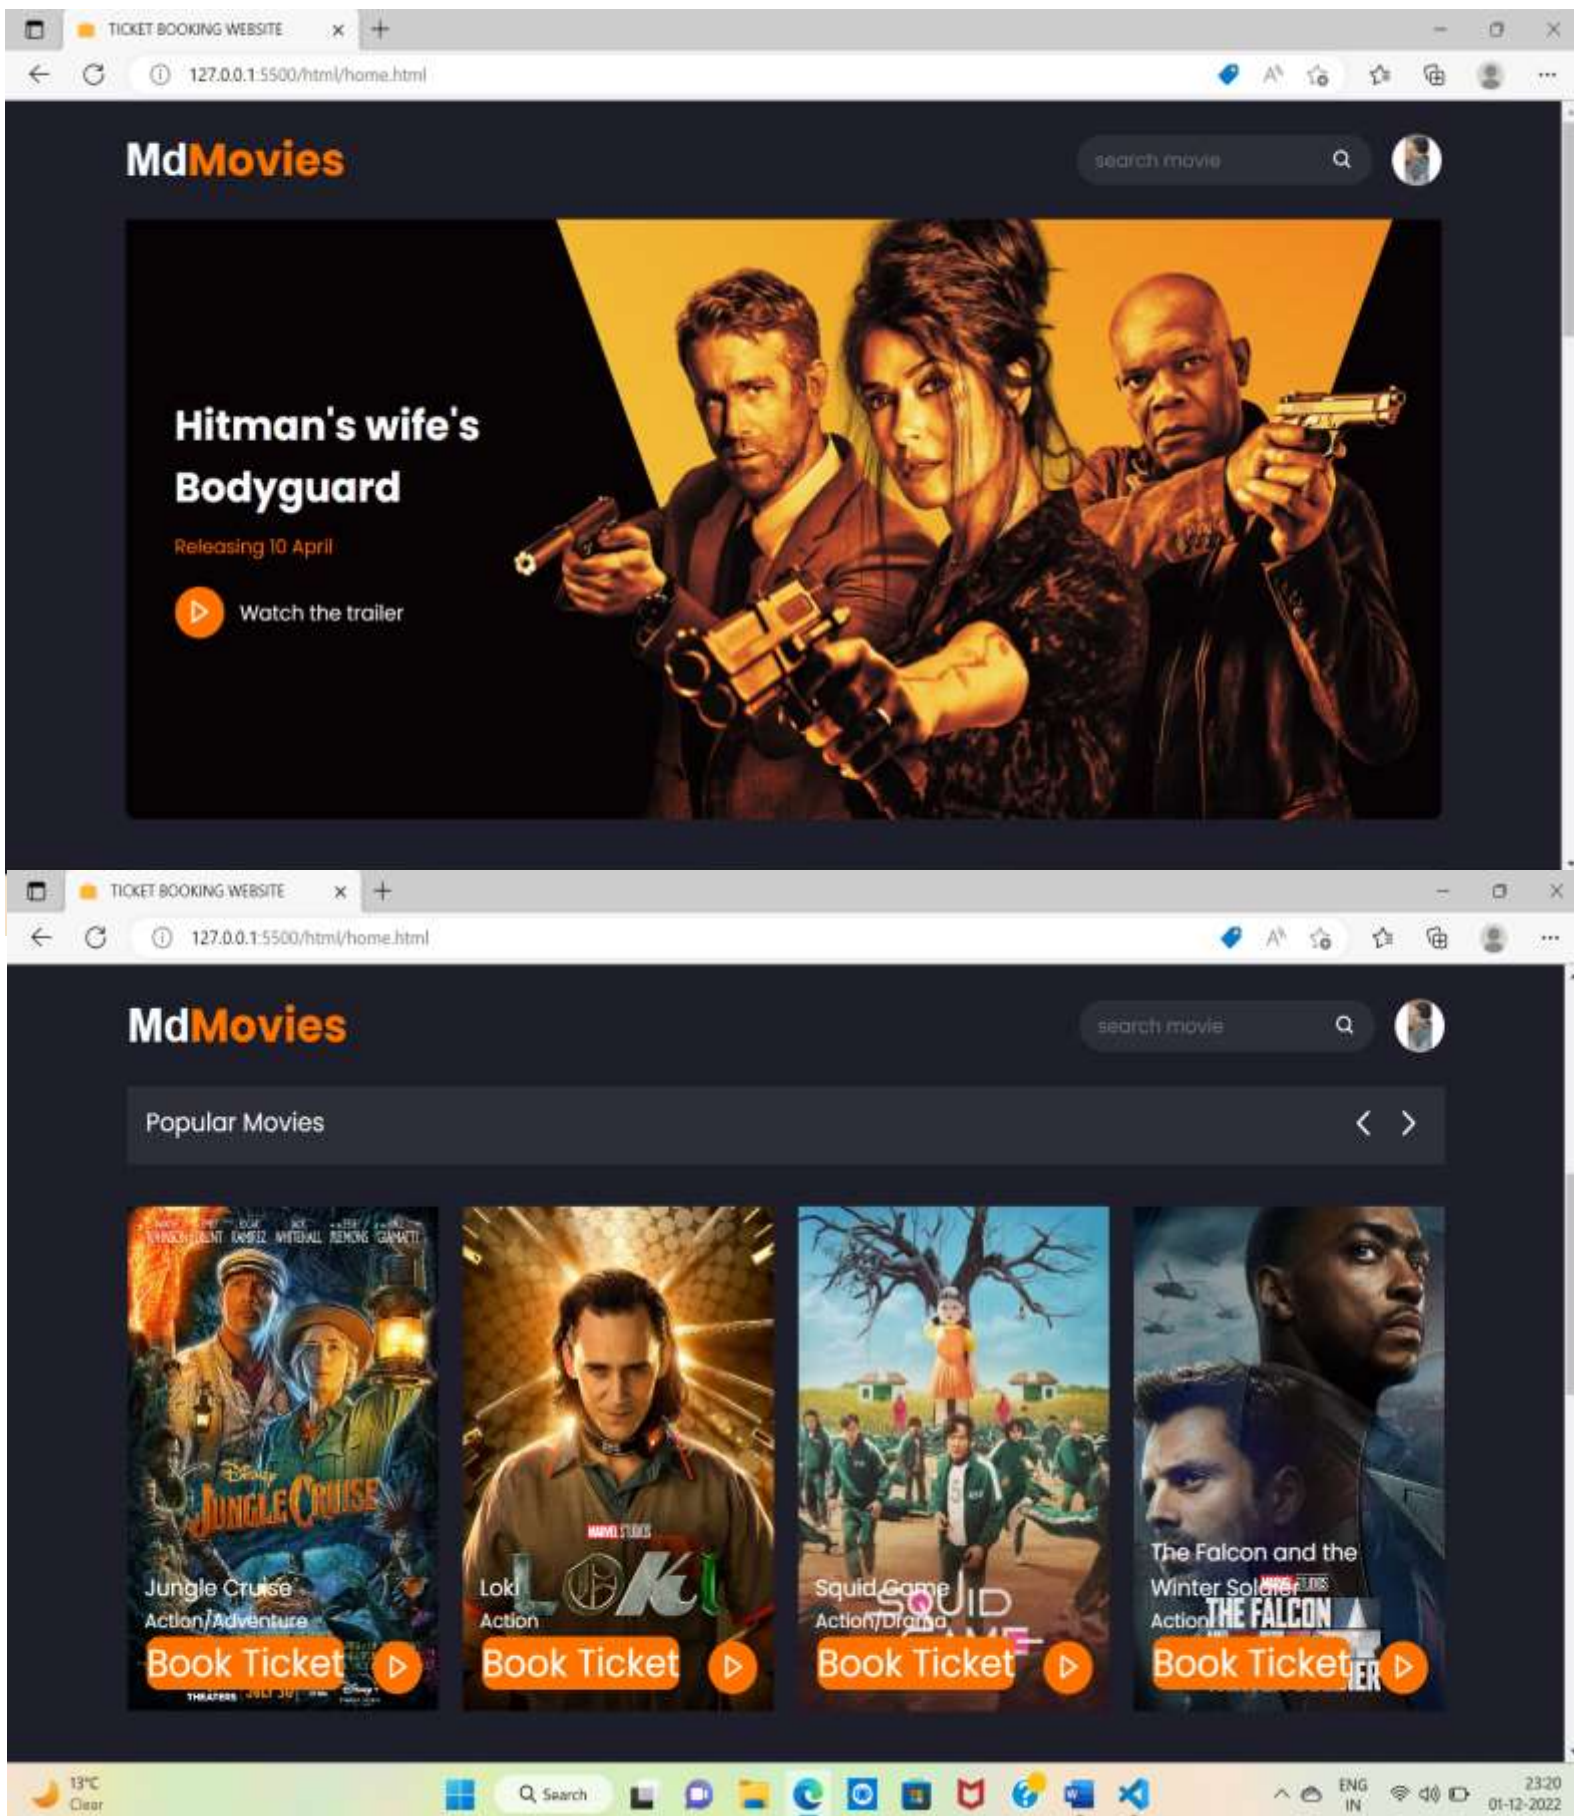

- It will grant more easy access.

- We are going to include recommendation system to this project so it will be helpful for the user to search and apply for that movies which they want.

CONCLUSION

Online ticket booking system has been developed successfully. System performance is also found to be satisfactory. This is a user-friendly application. Through this application, the cost can be reduced and efficiency is increased. There are several procedures that can be selected by customers. With the help of this application customers can book tickets, can know the status of a movie ticket, a cinema hall and time of movie can be chosen according to their choice, can select seats, can choose the time and pay through the portal after reaching the cinema hall. Online ticket booking system target internal and external audiences.

Online ticket booking system is very big to maintain but it always provides excellent facilities to accomplish the goal and help to reduce a complex paperwork process

through a mobile application. This can be a benefit using online ticket booking system application rather searching on several websites. With the help of online ticket booking system records are maintained and the database is updated time to time. Through online ticket booking system, technologies and feature have been introduced.
